1

***Note:** Refer to the power supply installation instruction for 24VDC wiring and additional information.*
Note: More than one person is recommended for this installation.

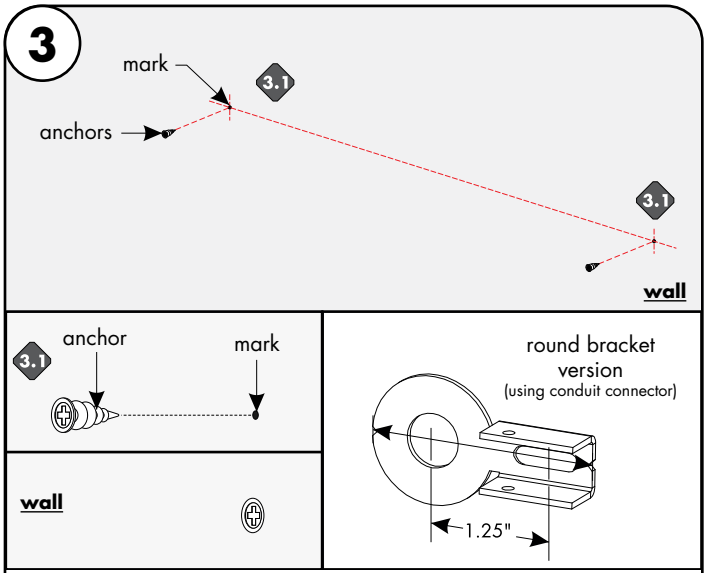

1.1 Lay the fixture next to the wall, use a level to align & center the fixture. Then make all necessary markings to install the mounting brackets to the drywall.

2

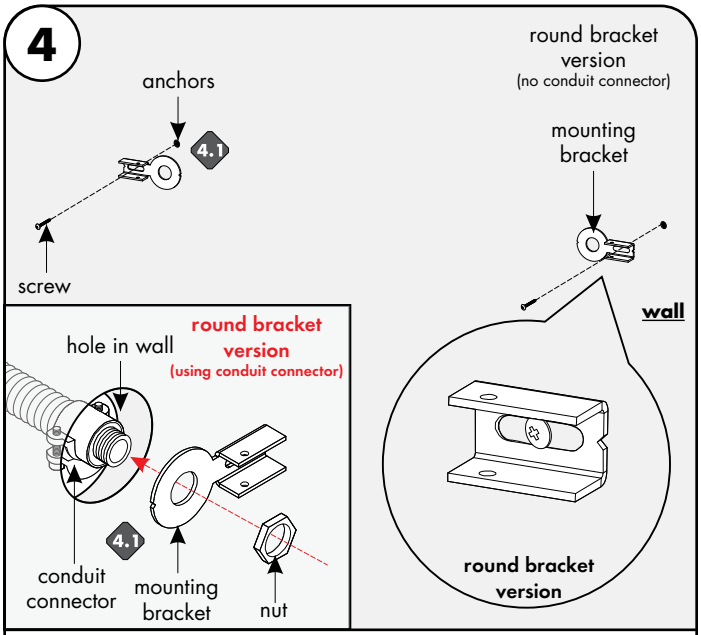

2.1 Carefully remove the screws from the top & bottom of the back of fixture. Then pull the mounting brackets completely out of the fixture.

3

3.1 Align and then tap each anchor onto the marks until the threaded section. Followed by tightening the anchors with a Phillips screw driver. For round bracket version only: if using conduit connector, conduit must be present within 1.25" of the anchor to fit properly.

4

4.1 Line up the mounting brackets to the installed anchors, and secure using the provided screws. If using conduit connector on the round bracket version, first secure conduit connector to mounting bracket. Then secure to the wall.

5

5.1 Feed fixture power wires to the power supply.

5.2 Align the fixture to the mounting brackets & secure by using the fixture screws.

5.3 For round bracket version only: if using the conduit connector to drywall, you may have to use mud, sand & paint to complete.
